

# Plugins

 **Not an exhaustive list.**

This is not an exhaustive list of plugins for Blesta. This list contains the plugins that ship with Blesta, or can be found on our [Github](#). There are many third party plugins, and some can be found on the [Marketplace](#). We are also available to hire for [custom development](#). If you're looking to create your own plugin, see [Creating a Plugin](#) in the developer manual.

## Plugins

--

## **Auto Cancel**

Auto Cancel is a plugin that automatically schedules suspended services for cancellation.

## **Billing at a Glance**

Billing at a Glance is a plugin that makes available a widget under the Billing Overview.

## **Component API**

The Component API plugin grants API access to core and plugin components through the API. This can be used to, among other things, download PDF invoices via the API.

## **Download Manager**

The Download Manager allows staff to make downloads available to clients and non-clients. Downloads can be restricted by client group, purchased package or available publicly.

## **Feed Reader**

Feed Reader is a plugin that makes available a widget under the Dashboard.

## **Import Manager**

Import Manager is a plugin that imports data from legacy Blesta, or a competing billing application.

## **License Manager**

## **Mass Mailer**

Mass Mailer is a plugin that allows the administrator to send bulk emails to clients.

## **Order System**

Order System is a plugin that allows the creation of public facing order forms, providing a method for clients to purchase new services.

## **PHPIDS**

PHPIDS is a plugin that makes available an Intrusion Detection System.

## **Portal/CMS**

Portal is a plugin that makes a web portal available at the default installation URL.

## **Reassign Pricing**

Reassign Pricing is a plugin that allows staff to change the package pricing of a service to one outside of the current package group.

## **Shared Login**

The Shared Login plugin allows third-party system to automatically log clients into Blesta.

## **Soft Auto Installer**

Soft Auto Installer is a plugin that can deploy software applications through Softaculous immediately after provisioning hosting accounts.

## **Support Manager**

The Support Manager provides a ticket system where clients and staff can create tickets through email and the web interface.

## **System Overview**

System Overview is a plugin that makes available a widget under the Dashboard.

## **System Status**

System Status is a plugin that makes available a widget under the Dashboard.
