Installing NameCheap

1. Visit [Settings] > [Company] > [Modules] > Available.
2. Click the "Install" button within the NameCheap module listing.

The screenshot shows the 'Manage Namecheap' interface. At the top right, there is a '+ ADD ACCOUNT' button. Below it is a section titled 'Accounts' containing a table with the following data:

User	API Key	Sandbox	Options
username	91qb27a3a8154b40d717276ee279d4ach	Yes	Edit Delete

The screenshot shows the 'Edit Namecheap Account' interface. It has a section titled 'Basic Settings' with the following fields:

- User:
- Key:
- Sandbox

At the bottom right, there is an 'UPDATE ACCOUNT' button.

Option	Description
User	The API User provided by NameCheap.
Key	The API key provided by NameCheap.
Sandbox	Check to enable sandbox mode. This simulates API requests, it will not register domains.

Creating Packages

Welcome Email

The "Tags" section describes tags that may be used in the welcome email. The welcome email content is inserted into the "Service Creation" email template under [Settings] > [Company] > [Emails] > Service Creation. Only details unique to this service should be entered into the welcome email section for the package.

Sample Email

This sample email could be used in the Package Welcome Email section to help you get started. Be sure to enter content for your welcome email in both the HTML and Text sections.

```
Your new domain has been successfully registered!  
  
Domain: {service.DomainName}  
  
Thank you for your business!
