About Modules

Modules allow the provisioning of services by making requests with third-party services. For details on specific modules see the [Modules](#) section of this manual. For information on [creating modules](#) see the [developer manual](#).

Installing a Module

Modules can be installed under [Settings] > [Company] > [Modules] > [Available] by clicking the **Install** button.

Uninstalling a Module

Modules can be uninstalled under [Settings] > [Company] > [Modules] > [Installed] by clicking the **Uninstall** button.
