About Payment Gateways

Payment Gateways allow the processing and collection of funds through payment processing services. There are a large variety of payment processing services. Some require that users be redirected to their site in order to process payment, while others allow the payment to be processed in the background. For details on specific modules see the [Gateways](#) section of this manual. For information on [creating gateways](#) see the [developer manual](#).

Installing a Payment Gateway

Payment Gateways can be uninstalled under [Settings] > [Company] > [Payment Gateways] > [Available] by clicking the **Install** button.

Uninstalling a Payment Gateway

Payment Gateways can be uninstalled under [Settings] > [Company] > [Payment Gateways] > [Installed] by clicking the **Uninstall** button.
