Installing ISPConfig

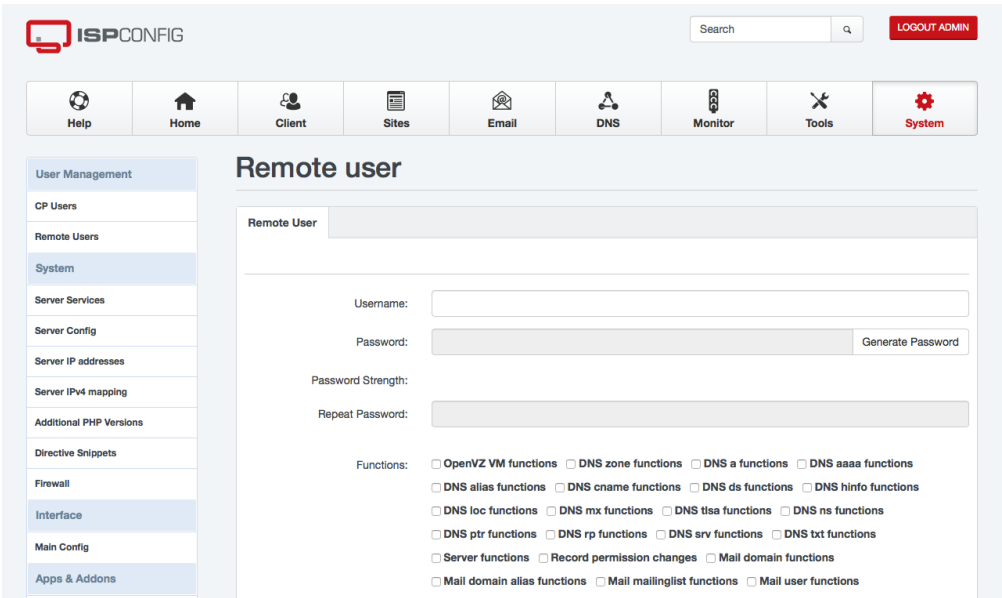

- 1. Visit [Settings] > [Company] > [Modules] > Available.
- 2. Click the "Install" button within the ISPConfig module listing.

A message will be displayed, indicating that the module was successfully installed. Then click the "Add Server" button.

In your ISPConfig admin panel, you will create a new API user under [System] > Remote Users, which should look similar to the following:

Enter your Remote User and Password, along with other details:

Add ISPConfig Server

Basic Settings

Server Label

Hostname

Port

8080

User Name

Password

☒ Use SSL when connecting to the API (recommended)

Account Limit

Name Servers

+ Add Additional Name Server

Name Server	Hostname	
Name server 1		Remove
Name server 2		Remove

Notes

Add Server

Field Name	Description
Server Label	A friendly name to identify this ISPConfig server by.
Hostname	The hostname for your ISPConfig server, e.g. ispconfig.domain.com
Port	The port for your ISPConfig server. Defaults to 8080.
User Name	The API username for your ISPConfig server, that you created under [System] > Remote Users in your ISPConfig Panel.
Password	The password for your ISPConfig server, that you created under [System] > Remote Users in your ISPConfig Panel.
Use SSL	Check to use SSL. (Recommended)
Account Limit	The maximum number of servers you want Blesta to provision to this server.
Name Servers	Enter 2 or more name servers that the customer should use for this server.
Notes	Notes - enter anything you like, e.g. "Production Server"

Creating Packages

Packages define the pricing, welcome email, module and more. Packages can be assigned to Package Groups, and added to Order Forms. To create a Package, visit [Packages] > Browse, and click the "Create Package" button.

Creating a Package consists of several sections:

Basic

The Basic section consists of the following options:

New Package

Basic

English, USEspañol, ES

Package Name

Description

Status

Active

Quantity Available

Unlimited

☒ Use renewal prices for package upgrades ?

Configurable Options

Module

ISPConfig

Field Name	Description
Package Name	Enter the name of this Package, it will be visible wherever services are listed and on any order forms. A separate name can be defined for each language in the system.
Description	Enter a Description for this Package. HTML is allowed, and descriptions appear on order forms. A separate description can be defined for each language in the system.
Status	"Active" is the default, "Inactive", and "Restricted" are also available.
Quantity Available	If this Package has a limited quantity available, enter the quantity, or leave it as "Unlimited".
Use renewal prices for package upgrades	When enabled, upgrading to this package will use renewal prices if they are set. The same will apply to any configurable options that are altered in the upgrade. The regular price will be used if this setting is disabled.
Configurable Options	A Configurable Option Group may be selected if previously created.
Module	Select "ISPConfig" for the module.

Module Options

The Module Options section consists of the following options, which are specific to ISPConfig:

Module Options

Server Group

Any

Server

ISPConfig Dev Server

ISPConfig Package

Custom

PHP Options

☐ No PHP☐ Fast-CGI☐ CGI☐ Mod-PHP☒ SuPHP☐ PHP-FPM☐ HHVM

SSH Options

☒ No SSH☐ Jailkit☐ SSH-chroot

Field Name	Description
Group	Select the server group for this package, if Blesta should choose the server.
Server	Optionally select a specific server that should be used for this Package.
ISPConfig	Select the ISPConfig package to use.
PHP Options	Select the PHP Options, e.g. "suPHP"
SSH Options	Select the SSH Options, e.g. "No SSH"

Pricing

Pricing

Add Additional Price

Term	Period	Currency	Price	Renewal Price ?	Setup Fee	Cancellation Fee	Options
	Month	USD	0.00	0.00	0.00	0.00	Remove
<input type="checkbox"/> Taxable <input type="checkbox"/> Cancel at end of term <input type="checkbox"/> Enable Pro rata ?							

Field Name	Description
Term	Enter the term for the desired pricing option. For example, if you wish to create a 3 month pricing option, enter 3 here.
Period	Select the period for this pricing option. "Day", "Week", "Month", "Year", and "One time" are options. The client will be invoiced every "term period", for example every 3 months if 3 is entered for term, and Month is selected for period.
Currency	Select the currency this pricing option is available for.
Price	Enter the price for this pricing option.
Renewal Price	If enabled, the renewal price will be used for service renewals and possibly prorated service changes, depending on the setting above.
Setup Fee	If there is a setup fee, enter it here.
Cancellation Fee	If there is a fee to cancel early, enter it here.

Click the "Add Additional Price" to add more pricing options. It's common for people to create 1 Month, 3 Month, 6 Month, and 1 Year price options. There are many possible combinations.

Welcome Email

```
<client_id> (client_id_code) (client_first_name) (client_last_name) (pricing_term) (pricing_period) (pricing_currency) (pricing_price) (pricing_setup_fee) (pricing_cancel_fee) (module_host_name) (module_name_servers) (package.package) (service.ispcfg_domain) (service.ispcfg_username) (service.ispcfg_password)
```

English, US

HTML Text

Source                                                                        

The "Tags" section describes tags that may be used in the welcome email. The welcome email content is inserted into the "Service Creation" email template under [Settings] > [Company] > [Emails] > Service Creation. Only details unique to this service should be entered into the welcome email section for the package.

Sample Email

This sample email could be used in the Package Welcome Email section to help you get started. Be sure to enter content for your welcome email in both the HTML and Text sections.

Thanks for choosing us for your web hosting needs!

Domain: {service.ispconfig_domain}
Username: {service.ispconfig_username}
Password: {service.ispconfig_password}

To log into ISPConfig please visit https://{module.host_name}:8080/login/

To make your site live, be sure to update your name servers to the following:

{% for name_server in module.name_servers %}
Name Server: {name_server}{% endfor %}

Thank you for your business!

When creating or editing a package that uses this module, the following tags will be available:

Tags	Description	Notes
{service.ispconfig_domain}	The domain for the hosting account.	e.g. "domain.com"
{service.ispconfig_username}	The username for the hosting account.	e.g. "domain"
{service.ispconfig_password}	The password for the hosting account.	

Due to the nature of tag objects containing several fields, many of which are likely irrelevant for use in email templates, but may be useful to you in certain circumstances, a dump of the tags are shown below.

The {package} object

Group Membership

Group Membership

A package must belong to at least one group to be usable.

☐ Select from Available Groups
 ☒ Create a New Group

Standard Package Group Name

ISPConfig

Create Package

If this is the first Package you are creating with this module, select the "Create a New Group" option, and enter a Group name. If you are adding a subsequent Package and wish for it to be part of the same group, select "Select from Available Groups", and move the group from the right to the left of the multi-select box.

When finished, click "Create Package" to create this package.

Final Steps

The only thing left to do is to add this Package Group to an order form so clients may place orders for your ISPConfig hosting accounts. See [Creating an Order Form](#) for more details.
