Blesta 4.5+

Soft Auto Installer is included with Blesta version 4.5+, but a copy that may work on versions as low as 4.4.0 is available at https://github.com/blesta/plugin-softaculous

About Soft Auto Installer

Soft Auto Installer can automatically deploy applications on new hosting accounts provisioned through hosting control panels running Softaculous. It does so by tying into the Event system in Blesta to make an API call to Softaculous after an account is provisioned.

Tie-Ins*

Widgets	Nav Links	Client Cards	Automation Tasks	Email Templates	ACL Permissions	Search	Ev
NONE	NONE	NONE	NONE	NONE	NONE	NONE	

** Plugins are powerful and are not limited to the tie-ins listed above, these are just some of the most common*

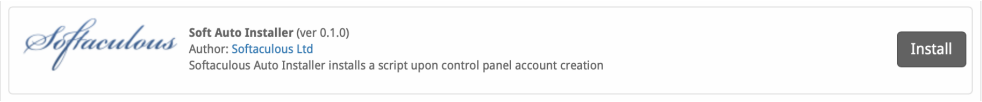

Supported Modules

The following modules are supported by the Soft Auto Installer for Softaculous:

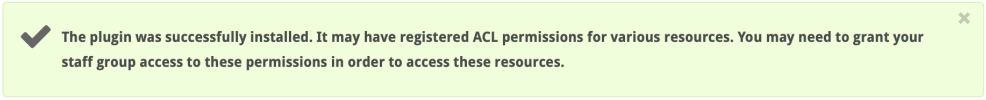

Module	Supported Version
cPanel	4.5
Plesk	4.8
CentOS Web Panel	4.8
DirectAdmin	4.9
Interworx	4.11
ispmanager	4.12

Installing Soft Auto Installer

To install the Auto Cancel plugin, visit [Settings] > [Company] > [Plugins] > Available, and click the "Install" button for Soft Auto Installer.

A message will be displayed, indicating that the plugin was successfully installed.

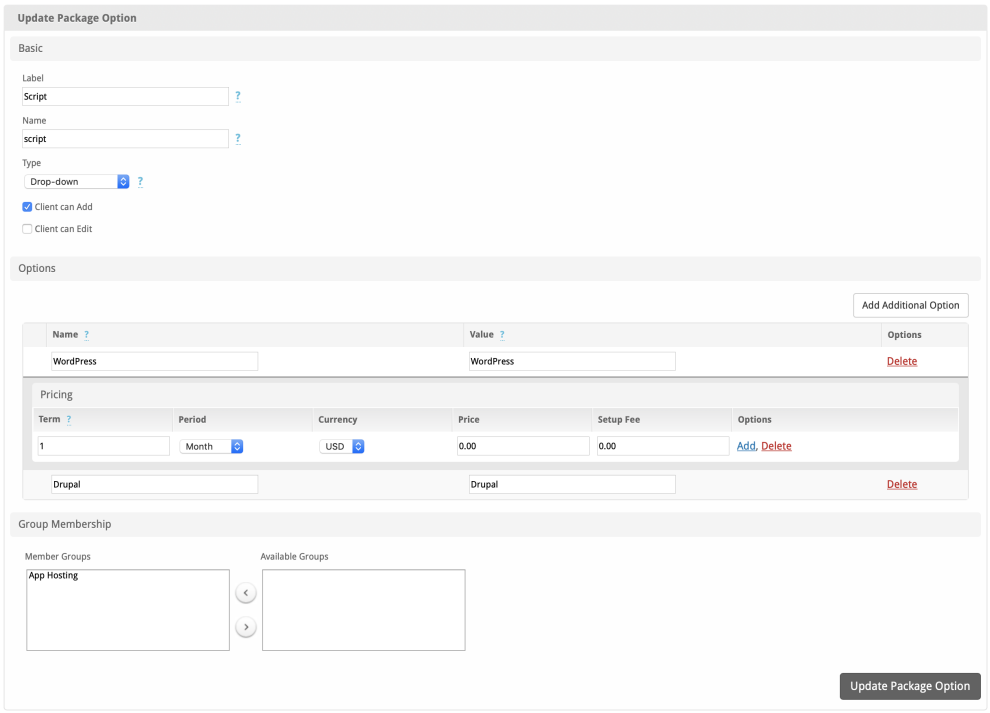

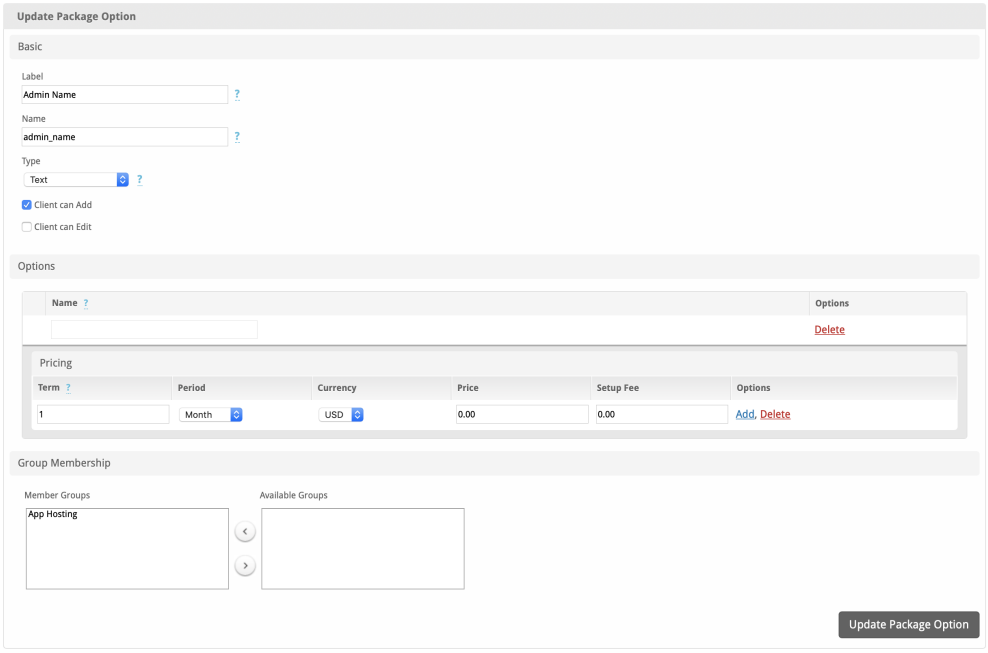

Usage

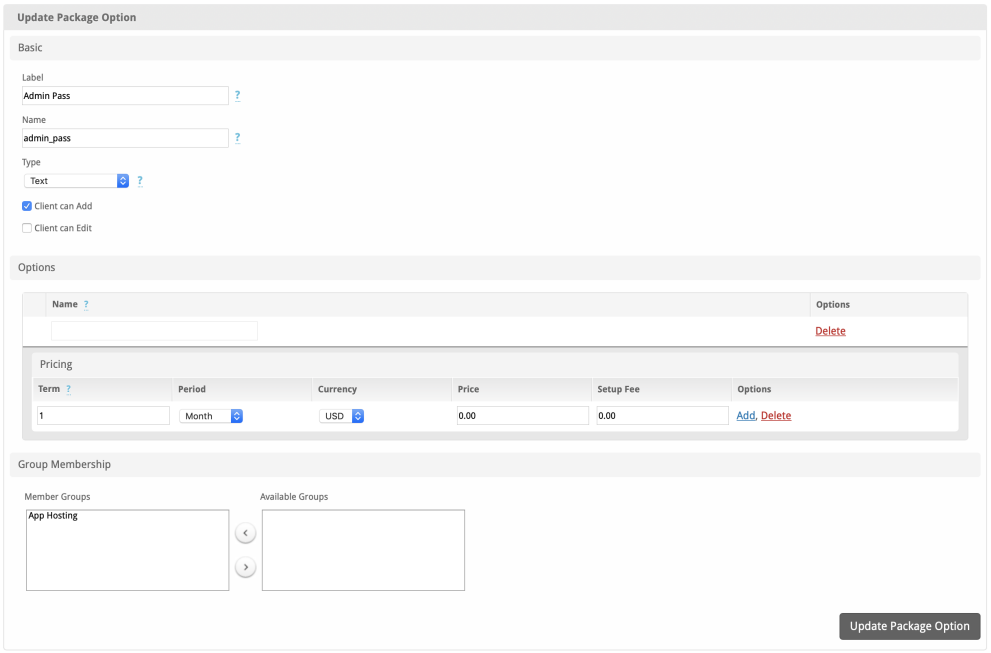

To use the Soft Auto Installer plugin you should already have a supported module installed and configured. You need to create some configurable options under [Packages] > [Configurable Options] as described:

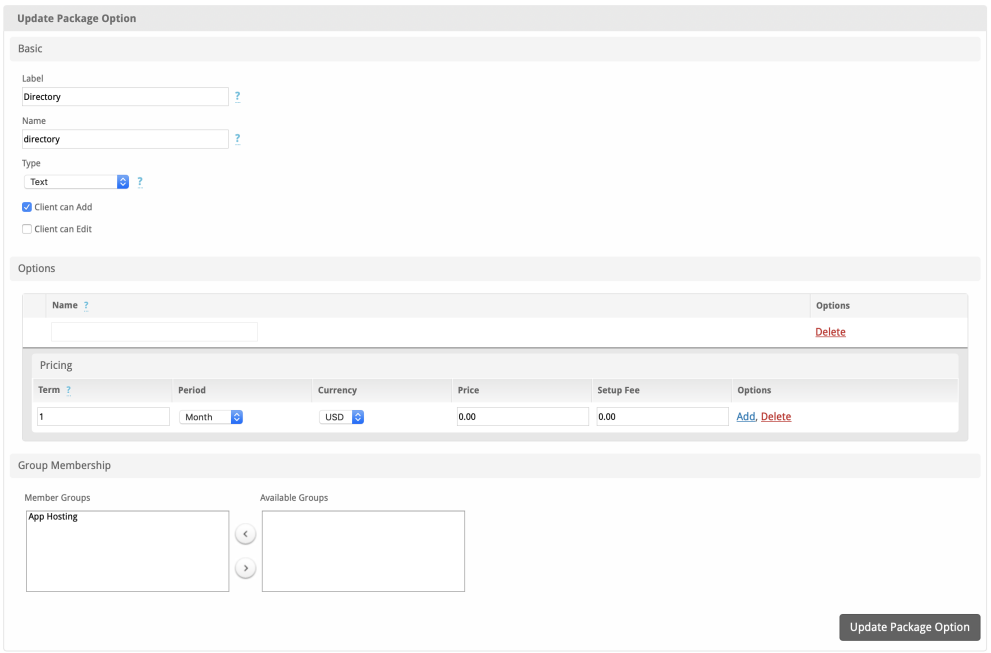

Label (Suggested, can be anything)	Name	Type	Value	Description
Script	**script**	Drop-Down, Radio	e.g. "WordPress", "Drupal", etc, see full list of apps below	• Check "Client can Add" only.
Admin Name	**admin_name**	Text	Client provides during checkout, e.g. "admin".	• Check "Client can Add" only.

Admin Pass	**admin_pass**	Text, Password	Client provides during checkout, e.g. "mypassword".	• Check "Client can Add" only.
Directory	**directory**	Text	Client provides during checkout, e.g. "/directory/".	• ***Optional config option, not required.*** • Check "Client can Add" only. • This will be the install directory, defaults to docroot if not provided.

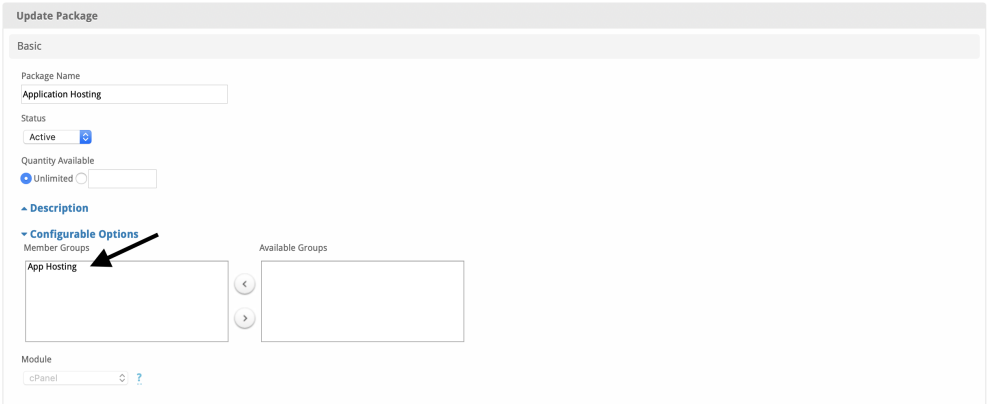

Then update or create your cPanel packages, and select the Config Option Group that the above options belong to on the Package as shown here:

Available Apps

Here's a list of **script** names that can be included with your Drop-Down, or Radio option for the Script. (Last generated 12/26/18)
