Registrar Module Features

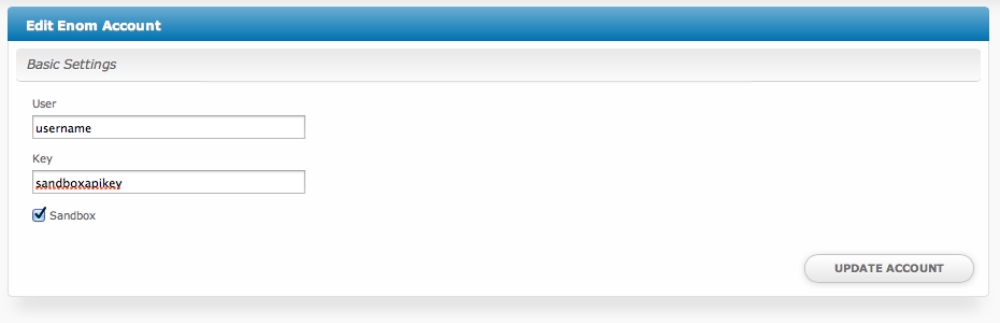

Register	Renew	Transfer	DNS Management	Email Forwarding	ID Protection	EPP Code	Pri
YES	YES	YES	NOT YET	NOT YET	NOT YET	YES	

*Orange statuses mean that the feature is supported but not controlled through the Domain Manager

Installing Enom

1. Visit [Packages] > [Domain Options] > [TLDs] > Registrars.
2. Click the "Install" button within the Enom module listing.

Common Issues

- I receive the error "The user and password combination appear to be invalid, or your Enom account may not be configured to allow API access."
  - Make sure your username and password are correct, **and your IP address is whitelisted with Enom.** API calls from Blesta will typically originate from the server's primary IP address, which may not necessarily be the IP address for your Blesta account.
