Installing Import Manager

1. Visit [Settings] > [Company] > [Plugins] > Available.
2. Click the "Install" button within the Import Manager plugin listing.

Import Manager (ver 1.13.0)
Author: [Phillips Data, Inc.](#)
Imports your data from another system into Blesta.

Install

Performing an Import

To perform an import, click the "Manage" button for the Import Manager plugin under [Settings] > [Company] > [Plugins] > Installed. You should see the Import Manager product selection page.

Import Manager	
Platform	Versions
Blesta	2.5
Clientexec	5.5
CSV	1.0
WHMCS	5.2 - 7.10 8.0

It is **strongly** recommended that you follow the [Migration Guide](#) to start and complete your import using this plugin.

Import via CLI

 To Import via cli navigate to the root directory of your Blesta installation and execute the following command

```
php index.php admin/plugin/import_manager/admin_manage_plugin/index
```

Import via CLI Scripted

 To Import via cli navigate to the root directory of your Blesta installation and execute the following command to script the import using WHMCS v8+

```
php index.php admin/plugin/import_manager/admin_manage_plugin/index --type whmcs --version 8.0 --host DBHOST --database DBNAME --user DBUSER --pass DBPASS --key CCENCRYPTIONHASH --balance_credit y --enable_debug y
```

Replace

- DBHOST with your database hostname
- DBNAME with your database name
- DBUSER with your database user
- DBPASS with your database pass
- CCENCRYPTIONHASH with your CC Encryption Hash
- If you don't want to balance credits (recommended), change to 'n'.
- If you don't want to enable debug, change to 'n'

Use the -h switch to show all options: `php index.php admin/plugin/import_manager/admin_manage_plugin/index -h`

Cleaning Up

After the import has completed successfully, you may safely uninstall the Import Manage plugin by clicking the "Uninstall" button for the plugin under [Settings] > [Company] > [Plugins] > Installed.
