Logicboxes

Table of Contents

- 1 Registrar Module Features
- 2 Installing LogicBoxes
- 3 Creating Packages
  - 3.1 Welcome Email

This LogicBoxes API is also used by ResellerClub, NetEarthOne, Resell.biz, and many others. Consult your registrar provider to see if they support the LogicBoxes platform.

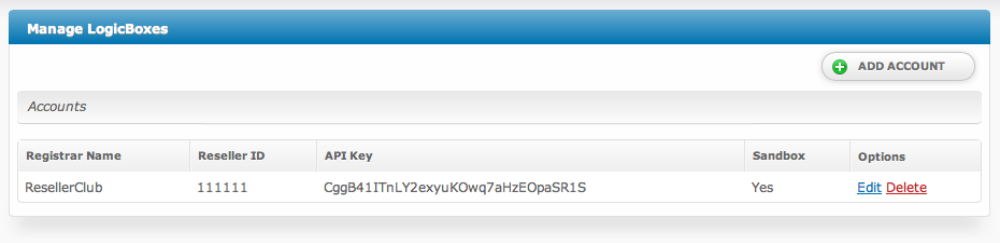

Registrar Module Features

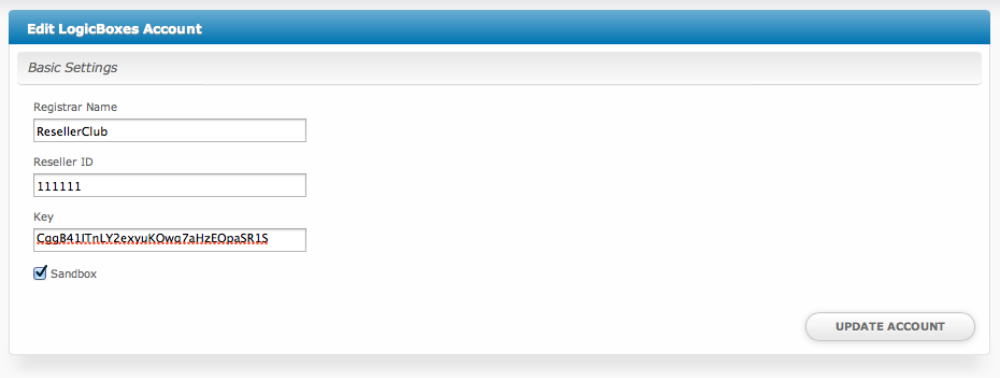

Register	Renew	Transfer	DNS Management	Email Forwarding	ID Protection	EPP Code	Pri
YES	YES	YES	NOT YET	NOT YET	NOT YET	YES	

*Orange statuses mean that the feature is supported but not controlled through the Domain Manager

Installing LogicBoxes

1. Visit [Settings] > [Company] > [Modules] > Available.
2. Click the "Install" button within the Logicboxes module listing.

Option	Description
Registrar Name	The name of the registrar. This is useful as many registrars use the LogicBoxes platform and you may process domains from more than one.
Reseller ID	The reseller ID provided by your registrar.
Key	The API key provided by your registrar.
Sandbox	Check to enable sandbox processing. This simulates API requests, and will not actually registrar domains.

Creating Packages

Welcome Email

The "Tags" section describes tags that may be used in the welcome email. The welcome email content is inserted into the "Service Creation" email template under [Settings] > [Company] > [Emails] > Service Creation. Only details unique to this service should be entered into the welcome email section for the package.

Sample Email

This sample email could be used in the Package Welcome Email section to help you get started. Be sure to enter content for your welcome email in both the HTML and Text sections.

```
Your new domain has been successfully registered!

Domain: {service.domain-name}

Thank you for your business!
