YES	YES	YES	NO	NO	NO	NO	

Installing Generic Domains

 Generic Domains is installed by default.

- 1. Visit [Packages] > [Domain Options] > [TLDs] > Registrars.
- 2. Click the "Install" button within the Generic Domains module listing.

Custom TLDs or Whois Servers

New or custom TLDs can be added to the Generic Domains module by editing the following file:

```
/components/modules/generic_domains/config/generic_domains.php
```

The following file controls the whois server used for the TLD for availability checks:

```
/vendors/io-developer/php-whois/src/Iodev/Whois/Configs/module.tld.servers.json
```
