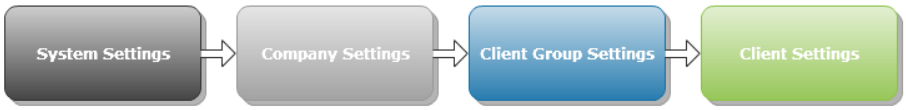
Settings Rundown

Settings consist of System Settings, Company Settings, Client Group Settings, and Client Settings which may be modified by Staff with the appropriate permissions as controlled by the ACL for their Staff Group.

> **Multi-Tiered Inheritance**
>
> Settings are multi-tiered and rely on inheritance. Higher level settings are specified at the System or Company level, and may be overridden at a lower (more direct) level.

Future development may make additional higher level settings available at lower levels for finer-grained control, but this can be done now through manually editing the database or through the use of Plugins.



Settings
Company Settings All settings for the currently selected company are editable under Company Settings. System Settings Settings not specific to any company are available under System Settings.
